PART I INTRODUCTION: THE TRADITIONAL THEORY	
1 Basic Dynamics of Point Particles and Collections	3
1.1 Newton's Space and Time	3
1.2 Single Point Particle	5
1.3 Collective Variables	6
1.4 The Law of Momentum for Collections	7
1.5 The Law of Angular Momentum for Collections	8
1.6 "Derivations" of the Axioms	9
1.7 The Work–Energy Theorem for Collections	10
1.8 Potential and Total Energy for Collections	10
1.9 The Center of Mass	11
1.10 Center of Mass and Momentum	13
1.11 Center of Mass and Angular Momentum	13
1.12 Center of Mass and Torque	14
1.13 Change of Angular Momentum	14
1.14 Center of Mass and the Work–Energy Theorems	15
1.15 Center of Mass as a Point Particle	16
1.16 Special Results for Rigid Bodies	17
1.17 Exercises	18
2 Introduction to Lagrangian Mechanics	24
2.1 Configuration Space	24
2.2 Newton's Second Law in Lagrangian Form	26
2.3 A Simple Example	27
2.4 Arbitrary Generalized Coordinates	27
2.5 Generalized Velocities in the q-System	28
2.6 Generalized Forces in the q-System	29
2.7 The Lagrangian Expressed in the q-System	30
2.8 Two Important Identities	31
2.9 Invariance of the Lagrange Equations	31
2.10 Relation Between Any Two Systems	33
2.11 More of the Simple Example	34
2.12 Generalized Momenta in the q-System	34
2.13 Ignorable Coordinates	35
2.14 Some Remarks About Units	35
2.15 The Generalized Energy Function	36
2.16 The Generalized Energy and the Total Energy	37
2.17 Velocity Dependent Potentials	38
2.18 Exercises	41

3	Lagrangian Theory of Constraints	46
3.1	Constraints Defined	46
3.2	Virtual Displacement	47
3.3	Virtual Work	48
3.4	Form of the Forces of Constraint	49
3.5	General Lagrange Equations with Constraints	52
3.6	An Alternate Notation for Holonomic Constraints	53
3.7	Example of the General Method	53
3.8	Reduction of Degrees of Freedom	54
3.9	Example of a Reduction	56
3.10	Example of a Simpler Reduction Method	58
3.11	Recovery of the Forces of Constraint	59
3.12	Example of a Recovery	60
3.13	Generalized Energy Theorem with Constraints	61
3.14	Tractable Non-Holonomic Constraints	62
3.15	Exercises	64
4	Introduction to Hamiltonian Mechanics	70
4.1	Phase Space	70
4.2	Hamilton Equations	73
4.3	An Example of the Hamilton Equations	75
4.4	Non-Potential and Constraint Forces	76
4.5	Reduced Hamiltonian	76
4.6	Poisson Brackets	78
4.7	From Lagrangian to Hamiltonian Mechanics	80
4.8	Canonical Transformations	80
4.9	Generating Functions	82
4.10	The Schroedinger Equation	84
4.11	The Ehrenfest Theorem	85
4.12	The Virial Theorem	86
4.13	Exercises	87
5	The Calculus of Variations	92
5.1	Paths in an N -Dimensional Space	93
5.2	Variations of Coordinates	94
5.3	Variations of Functions	95
5.4	Variation of a Line Integral	96
5.5	Finding Extremum Paths	98
5.6	Example of an Extremum Path Calculation	99
5.7	Invariance and Homogeneity	101
5.8	The Brachistochrone Problem	104
5.9	Calculus of Variations with Constraints	105
5.10	An Example with Constraints	108
5.11	Reduction of Degrees of Freedom	109
5.12	Example of a Reduction	110
5.13	Example of a Better Reduction	111
5.14	The Coordinate Parametric Method	111
5.15	Comparison of the Methods	114
5.16	Exercises	115

6	Hamilton's Principle	119
6.1	Hamilton's Principle in Lagrangian Form	119
6.2	Hamilton's Principle with Constraints	120
6.3	Comments on Hamilton's Principle	121
6.4	Phase-Space Hamilton's Principle	122
6.5	Exercises	124
7	Linear Operators and Dyadics	125
7.1	Definition of Operators	125
7.2	Operators and Matrices	127
7.3	Addition and Multiplication	129
7.4	Determinant, Trace, and Inverse	129
7.5	Special Operators	131
7.6	Dyadics	132
7.7	Resolution of Unity	134
7.8	Operators, Components, Matrices, and Dyadics	135
7.9	Complex Vectors and Operators	136
7.10	Real and Complex Inner Products	137
7.11	Eigenvectors and Eigenvalues	138
7.12	Eigenvectors of Real Symmetric Operator	139
7.13	Eigenvectors of Real Anti-Symmetric Operator	139
7.14	Normal Operators	141
7.15	Determinant and Trace of Normal Operator	142
7.16	Eigen-Dyadic Expansion of Normal Operator	143
7.17	Functions of Normal Operators	144
7.18	The Exponential Function	146
7.19	The Dirac Notation	147
7.20	Exercises	148
8	Kinematics of Rotation	152
8.1	Characterization of Rigid Bodies	152
8.2	The Center of Mass of a Rigid Body	153
8.3	General Definition of Rotation Operator	155
8.4	Rotation Matrices	157
8.5	Some Properties of Rotation Operators	157
8.6	Proper and Improper Rotation Operators	158
8.7	The Rotation Group	159
8.8	Kinematics of a Rigid Body	161
8.9	Rotation Operators and Rigid Bodies	162
8.10	Differentiation of a Rotation Operator	163
8.11	Meaning of the Angular Velocity Vector	166
8.12	Velocities of the Masses of a Rigid Body	167
8.13	Savio's Theorem	168
8.14	Infinitesimal Rotation	169
8.15	Addition of Angular Velocities	170
8.16	Fundamental Generators of Rotations	171
8.17	Rotation with a Fixed Axis	173
8.18	Expansion of Fixed-Axis Rotation	174
8.19	Eigenvectors of the Fixed-Axis Rotation Operator	177
8.20	The Euler Theorem	177
8.21	Rotation of Operators	180
8.22	Rotation of the Fundamental Generators	180

8.23	Rotation of a Fixed-Axis Rotation	181
8.24	Parameterization of Rotation Operators	182
8.25	Differentiation of Parameterized Operator	182
8.26	Euler Angles	184
8.27	Fixed-Axis Rotation from Euler Angles	186
8.28	Time Derivative of a Product	187
8.29	Angular Velocity from Euler Angles	188
8.30	Active and Passive Rotations	189
8.31	Passive Transformation of Vector Components	190
8.32	Passive Transformation of Matrix Elements	191
8.33	The Body Derivative	192
8.34	Passive Rotations and Rigid Bodies	193
8.35	Passive Use of Euler Angles	194
8.36	Exercises	196
9	Rotational Dynamics	200
9.1	Basic Facts of Rigid-Body Motion	200
9.2	The Inertia Operator and the Spin	201
9.3	The Inertia Dyadic	202
9.4	Kinetic Energy of a Rigid Body	203
9.5	Meaning of the Inertia Operator	203
9.6	Principal Axes	204
9.7	Guessing the Principal Axes	206
9.8	Time Evolution of the Spin	208
9.9	Torque-Free Motion of a Symmetric Body	209
9.10	Euler Angles of the Torque-Free Motion	213
9.11	Body with One Point Fixed	214
9.12	Preserving the Principal Axes	217
9.13	Time Evolution with One Point Fixed	218
9.14	Body with One Point Fixed, Alternate Derivation	218
9.15	Work–Energy Theorems	219
9.16	Rotation with a Fixed Axis	220
9.17	The Symmetric Top with One Point Fixed	222
9.18	The Initially Clamped Symmetric Top	226
9.19	Approximate Treatment of the Symmetric Top	227
9.20	Inertial Forces	228
9.21	Laboratory on the Surface of the Earth	231
9.22	Coriolis Force Calculations	233
9.23	The Magnetic – Coriolis Analogy	234
9.24	Exercises	235
10	Small Vibrations About Equilibrium	242
10.1	Equilibrium Defined	242
10.2	Finding Equilibrium Points	243
10.3	Small Coordinates	244
10.4	Normal Modes	245
10.5	Generalized Eigenvalue Problem	246
10.6	Stability	247
10.7	Initial Conditions	248
10.8	The Energy of Small Vibrations	249
10.9	Single Mode Excitations	249
10.10	A Simple Example	250

10.11	Zero-Frequency Modes	255
10.12	Exercises	256
11	Central Force Motion	260
11.1	Formulation of the Problem	260
11.2	Kepler's Law of Areas	262
11.3	Orbital Motion	263
11.4	General Features of the Motion	264
11.5	Inverse Square Force: the Kepler Problem	266
11.6	Details of the Kepler Orbits	267
11.7	Kepler's Third Law	271
11.8	The Eccentricity Vector	272
11.9	Periodic Orbits	275
11.10	The Isotropic Harmonic Oscillator	276
11.11	Exercises	279
12	Scattering	281
12.1	Cross Sections	281
12.2	Differential Cross Sections	282
12.3	Scattering by Hard Spheres	284
12.4	Scattering by an Inverse-Square Central Force	285
12.5	Scattering by General Central Forces	287
12.6	Exercises	287
PART II MECHANICS WITH TIME AS A COORDINATE		
13	Lagrangian Mechanics with Time as a Coordinate	291
13.1	Time as a Coordinate	291
13.2	A Change of Notation	292
13.3	Extended Lagrangian	293
13.4	Extended Momenta	294
13.5	Extended Lagrange Equations	295
13.6	A Simple Example	297
13.7	Invariance Under Change of Parameter	298
13.8	Change of Generalized Coordinates	299
13.9	Redundancy of the Extended Lagrange Equations	301
13.10	Forces of Constraint	301
13.11	Reduced Lagrangians with Time as a Coordinate	304
13.12	Exercises	306
14	Hamiltonian Mechanics with Time as a Coordinate	308
14.1	Extended Phase Space	308
14.2	Dependency Relation	308
14.3	Only One Dependency Relation	309
14.4	From Traditional to Extended Hamiltonian Mechanics	311
14.5	Equivalence to Traditional Hamilton Equations	313
14.6	Example of Extended Hamilton Equations	314
14.7	Equivalent Extended Hamiltonians	314
14.8	Alternate Hamiltonians	315
14.9	Alternate Traditional Hamiltonians	317
14.10	Not a Legendre Transformation	318
14.11	Dirac's Theory of Phase-Space Constraints	319

14.12	Poisson Brackets with Time as a Coordinate	321
14.13	Poisson Brackets and Quantum Commutators	323
14.14	Exercises	324
15	Hamilton's Principle and Noether's Theorem	327
15.1	Extended Hamilton's Principle	327
15.2	Noether's Theorem	329
15.3	Examples of Noether's Theorem	330
15.4	Hamilton's Principle in an Extended Phase Space	332
15.5	Exercises	333
16	Relativity and Spacetime	335
16.1	Galilean Relativity	335
16.2	Conflict with the Aether	337
16.3	Einsteinian Relativity	338
16.4	What Is a Coordinate System?	339
16.5	A Survey of Spacetime	340
16.6	The Lorentz Transformation	352
16.7	The Principle of Relativity	358
16.8	Lorentzian Relativity	359
16.9	Mechanism and Relativity	360
16.10	Exercises	362
17	Fourvectors and Operators	364
17.1	Fourvectors	364
17.2	Inner Product	366
17.3	Choice of Metric	368
17.4	Relativistic Interval	368
17.5	Spacetime Diagram	369
17.6	General Fourvectors	371
17.7	Construction of New Fourvectors	372
17.8	Covariant and Contravariant Components	373
17.9	General Lorentz Transformations	375
17.10	Transformation of Components	377
17.11	Examples of Lorentz Transformations	378
17.12	Gradient Fourvector	381
17.13	Manifest Covariance	382
17.14	Formal Covariance	382
17.15	The Lorentz Group	383
17.16	Proper Lorentz Transformations and the Little Group	384
17.17	Parameterization	385
17.18	Fourvector Operators	386
17.19	Fourvector Dyadics	387
17.20	Wedge Products	388
17.21	Scalar, Fourvector, and Operator Fields	389
17.22	Manifestly Covariant Form of Maxwell's Equations	390
17.23	Exercises	393
18	Relativistic Mechanics	395
18.1	Modification of Newton's Laws	395
18.2	The Momentum Fourvector	396
18.3	Fourvector Form of Newton's Second Law	397

18.4	Conservation of Fourvector Momentum	398
18.5	Particles of Zero Mass	399
18.6	Traditional Lagrangian	400
18.7	Traditional Hamiltonian	401
18.8	Invariant Lagrangian	402
18.9	Manifestly Covariant Lagrange Equations	403
18.10	Momentum Fourvectors and Canonical Momenta	404
18.11	Extended Hamiltonian	405
18.12	Invariant Hamiltonian	405
18.13	Manifestly Covariant Hamilton Equations	406
18.14	The Klein–Gordon Equation	407
18.15	The Dirac Equation	409
18.16	The Manifestly Covariant N -Body Problem	410
18.17	Covariant Serret–Frenet Theory	417
18.18	Fermi–Walker Transport	419
18.19	Example of Fermi–Walker Transport	421
18.20	Exercises	423
19	Canonical Transformations	429
19.1	Definition of Canonical Transformations	429
19.2	Example of a Canonical Transformation	430
19.3	Symplectic Coordinates	431
19.4	Symplectic Matrix	434
19.5	Standard Equations in Symplectic Form	435
19.6	Poisson Bracket Condition	436
19.7	Inversion of Canonical Transformations	437
19.8	Direct Condition	438
19.9	Lagrange Bracket Condition	439
19.10	The Canonical Group	440
19.11	Form Invariance of Poisson Brackets	442
19.12	Form Invariance of the Hamilton Equations	443
19.13	Traditional Canonical Transformations	445
19.14	Exercises	448
20	Generating Functions	451
20.1	Proto-Generating Functions	451
20.2	Generating Functions of the F_1 Type	453
20.3	Generating Functions of the F_2 Type	454
20.4	Examples of Generating Functions	456
20.5	Other Simple Generating Functions	457
20.6	Mixed Generating Functions	458
20.7	Example of a Mixed Generating Function	461
20.8	Finding Simple Generating Functions	461
20.9	Finding Mixed Generating Functions	463
20.10	Finding Mixed Generating Functions—An Example	464
20.11	Traditional Generating Functions	465
20.12	Standard Form of Extended Hamiltonian Recovered	467
20.13	Differential Canonical Transformations	468
20.14	Active Canonical Transformations	469
20.15	Phase-Space Analog of Noether Theorem	470
20.16	Liouville Theorem	471
20.17	Exercises	472

21	Hamilton–Jacobi Theory	477
21.1	Definition of the Action	477
21.2	Momenta from the S_1 Action Function	478
21.3	The S_2 Action Function	480
21.4	Example of S_1 and S_2 Action Functions	481
21.5	The Hamilton–Jacobi Equation	482
21.6	Hamilton’s Characteristic Equations	483
21.7	Complete Integrals	486
21.8	Complete Integrals and System Motion	487
21.9	Additive Separation of Variables	490
21.10	General Integrals	491
21.11	Time Independent Hamiltonians	496
21.12	Mono-Energetic Complete Integrals	498
21.13	The Optical Analogy	498
21.14	The Relativistic Hamilton–Jacobi Equation	500
21.15	Schroedinger and Hamilton–Jacobi Equations	500
21.16	The Quantum Cauchy Problem	501
21.17	The Bohm Hidden Variable Model	502
21.18	Feynman Path-Integral Technique	504
21.19	Quantum and Classical Mechanics	505
21.20	Exercises	506
22	Angle-Action Variables	509
22.1	Definition of the Action Variables	509
22.2	Canonical Transformation to Angle-Action Variables	510
22.3	Multiply Periodic Motion	512
22.4	Harmonic Oscillator	514
22.5	Central Force Motion	516
22.6	The Plane Kepler System	517
22.7	Transforming to Plane Delaunay Variables	519
22.8	The Bohr Model	520
22.9	The Old Quantum Theory	522
22.10	Inclined Orbits	523
22.11	Old and New Quantum Theories	525
22.12	Exercises	526

PART III MATHEMATICAL APPENDICES

A	Vector Fundamentals	529
A.1	Properties of Vectors	529
A.2	Dot Product	529
A.3	Cross Product	530
A.4	Linearity	530
A.5	Cartesian Basis	531
A.6	The Position Vector	532
A.7	Fields	533
A.8	Polar Coordinates	533
A.9	The Algebra of Sums	535
A.10	Miscellaneous Vector Formulae	537
A.11	Gradient Vector Operator	538
A.12	The Serret–Frenet Formulae	539

B	Matrices and Determinants	543
	B.1 Definition of Matrices	543
	B.2 Transposed Matrix	543
	B.3 Column Matrices and Column Vectors	543
	B.4 Square, Symmetric, and Hermitian Matrices	544
	B.5 Algebra of Matrices: Addition	545
	B.6 Algebra of Matrices: Multiplication	546
	B.7 Diagonal and Unit Matrices	547
	B.8 Trace of a Square Matrix	548
	B.9 Differentiation of Matrices	548
	B.10 Determinants of Square Matrices	548
	B.11 Properties of Determinants	549
	B.12 Cofactors	550
	B.13 Expansion of a Determinant by Cofactors	550
	B.14 Inverses of Nonsingular Matrices	551
	B.15 Partitioned Matrices	552
	B.16 Cramer's Rule	553
	B.17 Minors and Rank	554
	B.18 Linear Independence	554
	B.19 Homogeneous Linear Equations	555
	B.20 Inner Products of Column Vectors	556
	B.21 Complex Inner Products	557
	B.22 Orthogonal and Unitary Matrices	557
	B.23 Eigenvalues and Eigenvectors of Matrices	558
	B.24 Eigenvectors of Real Symmetric Matrix	559
	B.25 Eigenvectors of Complex Hermitian Matrix	562
	B.26 Normal Matrices	562
	B.27 Properties of Normal Matrices	563
	B.28 Functions of Normal Matrices	566
C	Eigenvalue Problem with General Metric	568
	C.1 Positive-Definite Matrices	568
	C.2 Generalization of the Real Inner Product	569
	C.3 The Generalized Eigenvalue Problem	570
	C.4 Finding Eigenvectors in the Generalized Problem	571
	C.5 Uses of the Generalized Eigenvectors	572
D	The Calculus of Many Variables	574
	D.1 Basic Properties of Functions	574
	D.2 Regions of Definition of Functions	574
	D.3 Continuity of Functions	574
	D.4 Compound Functions	575
	D.5 The Same Function in Different Coordinates	575
	D.6 Partial Derivatives	576
	D.7 Continuously Differentiable Functions	577
	D.8 Order of Differentiation	577
	D.9 Chain Rule	577
	D.10 Mean Values	577
	D.11 Orders of Smallness	578
	D.12 Differentials	578
	D.13 Differential of a Function of Several Variables	579
	D.14 Differentials and the Chain Rule	580

D.15	Differentials of Second and Higher Orders	580
D.16	Taylor Series	581
D.17	Higher-Order Differential as a Difference	581
D.18	Differential Expressions	582
D.19	Line Integral of a Differential Expression	583
D.20	Perfect Differentials	584
D.21	Perfect Differential and Path Independence	586
D.22	Jacobians	587
D.23	Global Inverse Function Theorem	589
D.24	Local Inverse Function Theorem	592
D.25	Derivatives of the Inverse Functions	593
D.26	Implicit Function Theorem	594
D.27	Derivatives of Implicit Functions	594
D.28	Functional Independence	595
D.29	Dependency Relations	596
D.30	Legendre Transformations	596
D.31	Homogeneous Functions	597
D.32	Derivatives of Homogeneous Functions	598
D.33	Stationary Points	599
D.34	Lagrange Multipliers	599
D.35	Geometry of the Lagrange Multiplier Theorem	601
